REISSUE APPLICATION DECLARATION BY THE INVENTOR

Docket Number (Optional)

B-3425RE 617265-1

I hereby declare that:

Each Inventor's residence, mailing address and citizenship are stated below next to their name.

I believe the inventors named below to be the original and first inventor(s) of the subject matter which is described and claimed in patent number 6,355,046 B2, granted March 12, 2002 and for which a reissue patent is sought on the invention entitled INSERTING DEVICE FOR DEFORMABLE INTRAOCULAR LENS,

the specification of which

is attached hereto.

was filed on March 12, 2004 as reissue application number 10/800,360

and was amended on _____
(If applicable)

I have reviewed and understand the contents of the above-identified specification, including the claims, as amended by any amendment referred to above.

I acknowledge the duty to disclose information which is material to patentability as defined in 37 CFR 1.56.

I hereby claim foreign priority benefits under 35 U.S.C. 119(a)-(d) or (f), or 365(b). Attached is form PTO/SB/02B (or equivalent) listing the foreign applications.

I verily believe the original patent to be wholly or partly inoperative or invalid, for the reasons described below. (Check all boxes that apply.)

by reason of a defective specification or drawing.

by reason of the patentee claiming more or less than he had the right to claim in the patent.

by reason of other errors.

At least one error upon which reissue is based is described below. If the reissue is a broadening reissue, such must be stated with an explanation as to the nature of the broadening:

This is a broadening reissue. Claim 1 has been amended to recite that only a peripheral edge portion of the deformable intraocular lens is engaged with the enclosing member when the deformable intraocular lens is received in the enclosing member, and the limitations regarding the enclosing member having an open position and a closed position, the peripheral edge portion of the deformable intraocular lens being engaged with said enclosing member when the deformable intraocular lens is placed in the enclosing member and the enclosing member is in the open position, the optical portion of the deformable intraocular lens substantially not coming into contact with the enclosing member when the enclosing member is in the open position, and the deformable intraocular lens being deformed into a smaller size when the deformable intraocular lens is in the enclosing member and the enclosing member is closed from the open position to the closed position have been excised from claim 1 and are presented in new dependent claim 39. New dependent claim 38 recites that when the enclosing member holds the deformable intraocular lens, only a peripheral edge portion of the deformable intraocular lens is engaged with the enclosing member.
